Maths Alive! Workshop for Parents

The materials shared in today's workshop is under the property of Junyuan Primary School, Mathematics Department.

Please do not take any photos or videos throughout the sharing.

Thank you for your understanding.

 To see how Mathematics is connected to everyday life.

 To introduce strategies used to solve word problems.

Introduction to Mathematics Curriculum Framework

02

Introduction to Heuristics Word Problems

- Guess and Check
- Restate the Problem

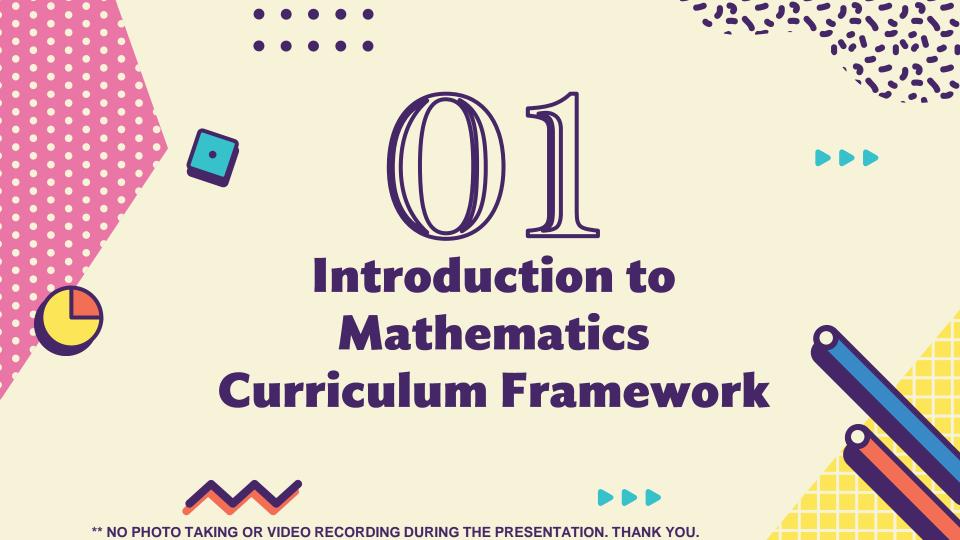

Problems connected to everyday life

- Rate of Charges
- Shortage and Excess
 - Ratio
- Mixed Topics

Koobits

Aims and Framework of Mathematics

Mathematics education aims to enable students to:

- □ acquire the <u>necessary mathematical concepts and skills</u> for everyday life,
- develop the <u>necessary process skills</u> for the acquisition and <u>application</u> of mathematical concepts and skills.
- develop the <u>mathematical thinking</u> and <u>problem-solving skills</u> and apply these skills to formulate and solve problems.

- □ recognise and use <u>connections</u> among mathematical ideas, and between mathematics and other disciplines.
- develop positive attitudes towards mathematics.

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU.

Mathematics

connected to

develops

Everyday Life

Acquire mathematical concepts and skills for everyday use

Logical Reasoning

Develops thinking, reasoning and communication skills

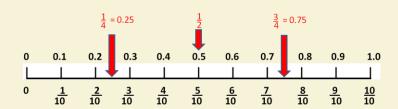

NUMBER AND ALGEBRA

 Students learning about whole numbers, fractions and decimals and use their knowledge in everyday situations.
 Word problems provide students with opportunity to apply mathematics concepts and skills in everyday situations

MEASUREMENT AND GEOMETRY

• Students learn about **length**, **mass**, **area**, **volume**, **time**. This helps them develop **skills of measuring** and see the relevance in everyday situations.

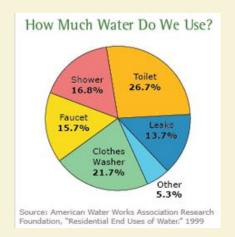

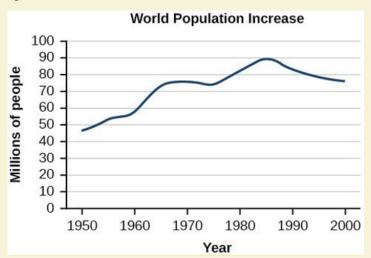

STATISTICS

 Students learn the methods and tools to analyse and interpret data in graphs and pie charts so that the useful information can be used for decision making and understanding a situation. This is a practical aspect of mathematics that is relevant to everyday life and situations

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU.

Key Questions to ask when solving a problem

See (What is given?)	Think (What is my plan?)
 Can I retell the problem in my own words? What am I asked to find? What are the key words? What are/are not given? 	Have I solved the same type of problem before? What methods can I use? Can I solve a part of the problem first?
Act (What do I need to do?) 1. Can I carry out my plan?	Relook (Reflect and Check)
2. Can I show the steps correctly? 3. Can I show the steps clearly?	Does my method make sense? How do I know? Do I have another way to solve this problem? Is my working/diagram/model accurate? Have I checked my solution thoroughly? Can I ask another question?

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU.

GUESS AND CHECK

QUESTION 1:

John bought a total of 20 oranges and apples for \$9.40. Each orange cost 40 cents and each apple cost 60 cents. How many oranges did he buy?

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU.

Question 1: Guess & Check

John bought a total of 20 oranges and apples for \$9.40 Each orange cost 40 cents and each apple cost 60 cents. How many oranges did he buy?

No. of oranges	Cost of oranges (40 cents)	No. of apples	Cost of apples (60 cents)	Total Cost	Check (\$9.40)
10	10 x \$0.40 = \$4	10	10 x \$0.60 = \$6	\$4 + \$6 = \$10	×
11	11 x \$0.40 = \$4.40	9	9 x \$0.60 = \$5.40	\$4.40 + \$5.40 = \$9.80	×
13	13x \$0.40 = \$5.20	7	7 x \$0.60 = \$4.20	\$5.20 + \$4.20 = \$9.40	√

Answer: 13 oranges

GUESS AND CHECK

QUESTION 2:

In a test, there were a total of 40 questions.

For every question answered correctly, a student was awarded 4 points.

For each question answered wrongly, 1 point was deducted.

If Anna scored 130 points, how many questions did she answer wrongly?

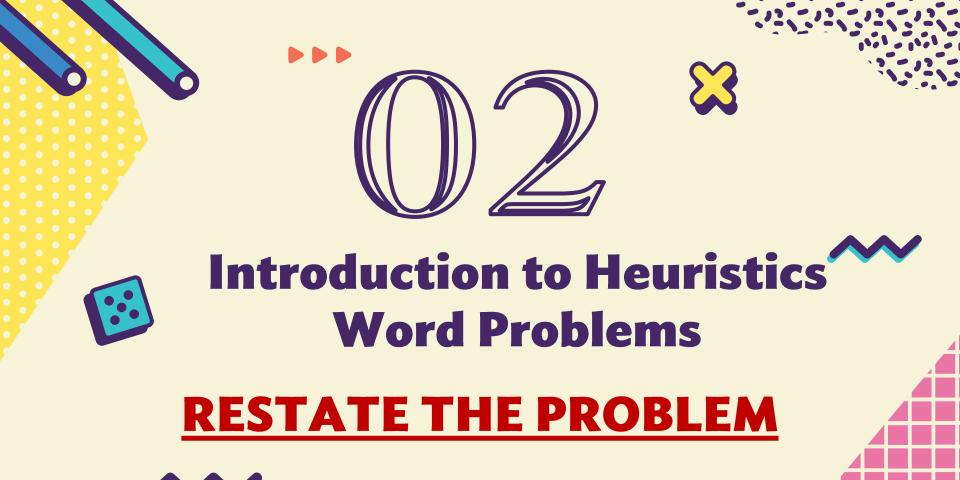

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU

Question 2: Guess & Check

In a test, there were a total of 40 questions. For every question answered correctly, a student was awarded 4 points. For each question answered wrongly 1 point was deducted. If Anna scored 130 points, how many questions did she answer wrongly?

Correct answers	Marks awarded	Wrong answers	Marks deducted	Total marks	Check (130 points)
20	20 x 4 = 80	20	20 x 1= 20	80 - 20 = 60	×
30	30 x 4 = 120	10	10 x 1= 10	120 – 10 = 110	×
34	34 x 4 = 136	6	6 x 1= 6	136 – 6 = 130	√

Answer: 6 wrong answers

RESTATE THE PROBLEM

QUESTION 1:

The total cost of 2 tables and 5 chairs is \$2110.50. The total cost of 3 tables and 6 chairs is \$2814. What is the cost of 1 chair?

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU

QUESTION 1: Restate the Problem

The total cost of 2 tables and 5 chairs is \$2110.50. The total cost of 3 tables and 6 chairs is \$2814. What is the cost of 1 chair?

$$2T + 5C \rightarrow $2110.50$$

$$3T + 6C \rightarrow $2814$$

$$1T + 1C \rightarrow $2814 - $2110.50 = $703.50$$

$$3T + 3C \rightarrow $703.50 \times 3 = $2110.50$$

$$3C \rightarrow $2814 - $2110.50 = $703.50$$

$$1 \text{ C} \rightarrow \$703.50 \div 3 = \$234.50$$

The cost of 1 chair is **\$234.50**.

QUESTION 2:

- 4 pens and 7 exercise books cost \$43.
- 4 pens and 3 exercise books cost \$23.

Find the cost of 1 pen.

^{**} NO PHOTO TAKING OR VIDEO RECORDING DURING THE PRESENTATION. THANK YOU.

QUESTION 2: Restate the Problem

4 pens and 7 exercise books cost \$43. 4 pens and 3 exercise books cost \$23. Find the cost of 1 pen.

$$4P + 7E \rightarrow $43$$

 $4P + 3E \rightarrow 23

$$4E \rightarrow $43 - $23 = $20$$

$$1E \rightarrow $20 \div 4 = $5$$

$$3E \rightarrow $5 \times 3 = $15$$

$$4P \rightarrow $23 - $15 = $8$$

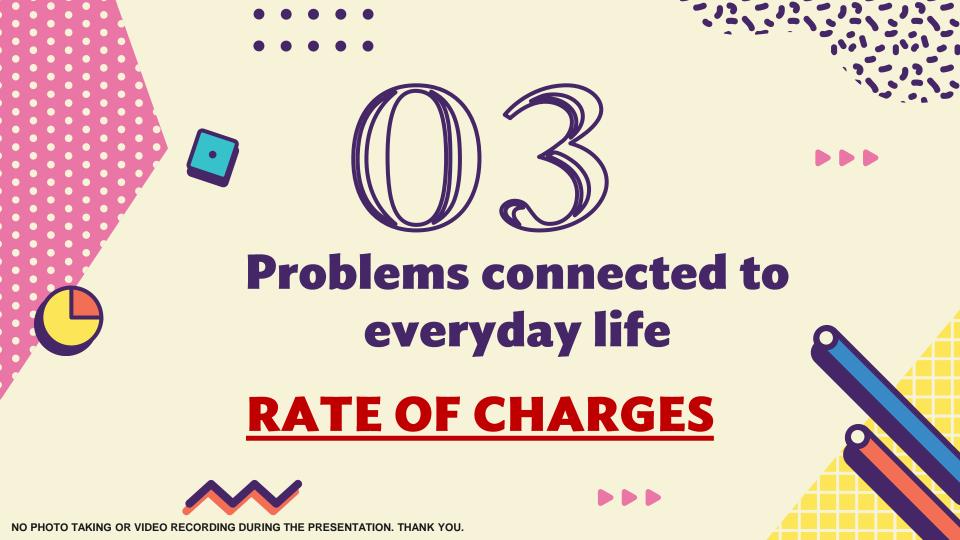

$$1P \to \$8 \div 4 = \$2$$

The cost of 1 pen is \$2.

$$7E \rightarrow $5 \times 7 = $35$$

OR
$$4P \rightarrow $43 - $35 = $8$$

$$1P \to \$8 \div 4 = \$2$$

RATE OF CHARGES

Question 1: The table shows the parking charges at a carpark.

Car Park Charges		
For the first hour	\$2.50	
For every additional $\frac{1}{2}$ hour	\$0.80	

Mr Tan parks his car from 11.30 a.m. to 2.00 p.m. How much will he have to pay?

QUESTION 1: Rate of Charges

The table shows the parking charges at a carpark. Mr Tan parks his car from 11.30 a.m. to 2.00 p.m. How much will he have to pay?

Car Park Charges		
For the first hour	\$2.50	
For every additional ¹ / ₂ hour	\$0.80	

11.30 a.m. to 12.30 p.m. → First h - \$2.50

12.30 p.m.
$$-$$
 1.30 p.m. \rightarrow 2 x \$0.80 = \$1.60

1.30 p.m. − 2p.m.
$$\rightarrow$$
 \$0.80

Total
$$\rightarrow$$
 \$2.50 + \$1.60 + \$0.80 = **\$4.90**

He has to pay \$4.90

RATE OF CHARGES

QUESTION 2:

PSLE Question

Shanti took a taxi from home to her office. Her taxi fare was based on the charges shown.

First 1 km	\$3.20
Every additional 400 m or less	\$0.22
Every 45 seconds of waiting or less	\$0.22

The taxi stopped once at a traffic light for 1 min and travelled a total distance of 5.8 km to reach Shanti's office. How much was her taxi fare?

QUESTION 2: Rate of Charges

Shanti took a taxi from home to her office.

Her taxi fare was based on the charges shown.

First 1 km Every additional 400 m or less	\$3.20 \$0.22
Every 45 seconds of waiting or less	\$0.22

The taxi stopped once at a traffic light for 1 min and travelled a total distance of 5.8 km to reach Shanti's office. How much was her taxi fare?

5.8 km – 1 km = 4.8 km First 1 km
$$\rightarrow$$
 \$3.20

$$4.8 \text{ km} = 4800 \text{ m}$$

$$4800 \text{ m} \div 400 \text{ m} = 12 (12 \text{ additional } 400 \text{ m} \text{ in } 4800 \text{ m})$$

For this 4800 m
$$\rightarrow$$
 \$0.22 x 12 = \$2.64

$$1 \min = 60 s$$

$$60 \text{ s} - 45 \text{ s} = 15 \text{ s} \rightarrow \$0.22$$

Her taxi fare was \$6.28.

RATE OF CHARGES

Question 3:

An adult entry ticket to a travel fair costs \$3.

For every 4 paying adults, the 5th adult receives a free

entry ticket.

What is the total cost of the entry tickets for 22 adults?

Question 3: Rate of Charges

An adult entry ticket to a travel fair costs \$3. For every 4 paying adults, the 5th adult receives a free entry ticket. What is the total cost of the entry tickets for 22 adults?

1 group of 5 adults
$$\rightarrow$$
 \$12
4 groups of 5 adults \rightarrow \$12 x 4 = \$48

4 groups of 5 adults \rightarrow \$12 x 4 = \$48 \$48 + \$3 + \$3 = **\$54** (total cost of 4 groups of 5 adults with 2 adults remaining)

The total cost is \$54.

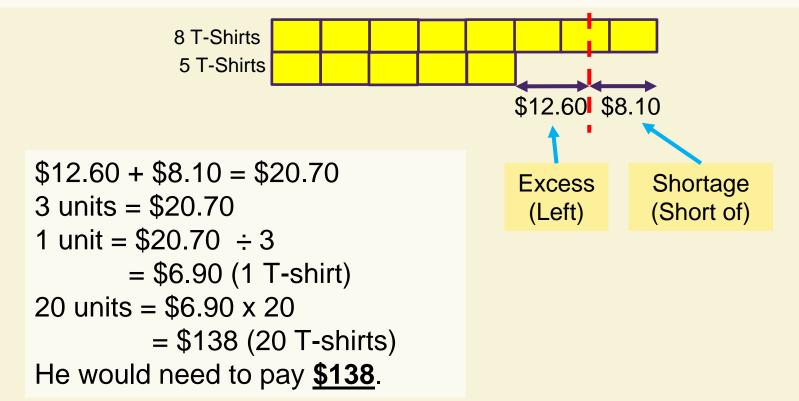

SHORTAGE AND EXCESS

Question 1:

Raymond wanted to buy 8 T-shirts but he was short of \$8.10. Instead he bought 5 T-shirts and had \$12.60 left. How much would he need to pay for 20 T-shirts?

Question 1 : Shortage & Excess
Raymond wanted to buy 8 T-shirts but he was short of \$8.10. Instead he bought 5 T-shirts and had \$12.60 left. How much would he need to pay for 20 T-shirts?

SHORTAGE AND EXCESS

Question 2:

Ben had a sum of money. He wanted to buy

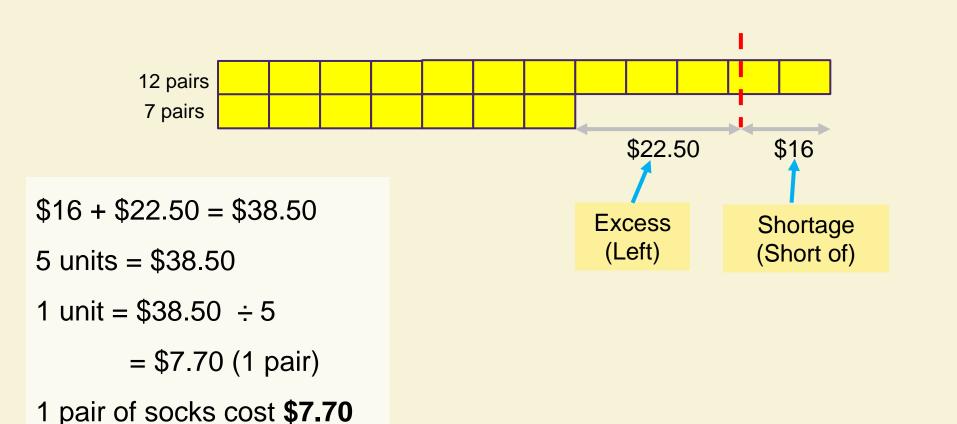

12 pairs of socks but was short of \$16.

Instead he bought 7 pairs of socks and was

left with \$22.50. What was the cost of 1 pair of socks?

Question 2 : Shortage & Excess

Ben had a sum of money. He wanted to buy 12 pairs of socks but was short of \$16. Instead he bought 7 pairs of socks and was left with \$22.50. What was the cost of 1 pair of socks?

SHORTAGE AND EXCESS

Question 3:

Mr Lee gives a bag of sweets to each of his students. If he gives 13 sweets to each student, he is short of 39 sweets. If he gives 9 sweets to each student, he is short of 3 sweets.

- (a) How many students does he have?
- (b) How many sweets does he have altogether?

Question 3: Shortage & Excess

Mr Lee gives a bag of sweets to his students. If he gives 13 sweets to each student, he is short of 39 sweets. If he gives 9 sweets to each student, he is short of 3 sweets.

- (a) How many students does he have?
- (b) How many sweets does he have altogether?

39 - 3 = 36 (The difference in the number of sweets that are short of for both scenarios)

13 - 9 = 4 (The difference in the number of sweets given to each student)

$$36 \div 4 = 9$$

(a) He has **9** students.

$$13 \times 9 = 117$$

$$117 - 39 = 78$$

(b) He has **78** sweets altogether.

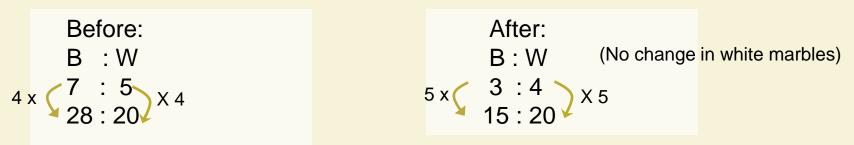

RATIO - ONE UNCHANGED QUANTITY

Question 1:

The number of black marbles to the number of white marbles was in the ratio 7:5. Mrs Tan gave away 39 black marbles and the ratio of the number of black marbles to the number of white marbles became 3: 4. How many marbles did she have altogether at first?

Question 1: Ratio (One unchanged quantity)

The number of black marbles to the number of white marbles was in the ratio 7:5. Mrs Tan gave away 39 black marbles and the ratio of the number of black marbles to the number of white marbles became 3:4. How many marbles did she have altogether at first?

13 units = 39
1 unit =
$$39 \div 13 = 3$$

48 units = $48 \times 3 = 144$ (Altogether at first)

28 u - 15 u = 13 u (difference in units of black marbles)

She had **144** marbles altogether at first.

28 u + 20 u = 48 u (total at first)

RATIO - ONE UNCHANGED QUANTITY

Question 2:

There were 80 mangoes and oranges in a fruit stall.

30% of them were mangoes. When some mangoes

were sold, the percentage of mangoes dropped to 20%.

How many mangoes were sold?

Question 2: Ratio (One unchanged quantity)

There were 80 mangoes and oranges in a fruit stall. 30% of them were mangoes. When some mangoes were sold, the percentage of mangoes dropped to 20%. How many mangoes were sold?

10 mangoes were sold.

RATIO - CONSTANT TOTAL

Question 3:

In a bus, the ratio of the number of men to the number of women was 2:5. After 3 men alighted the bus and another 3 women boarded the bus, the ratio of the number of men to the number of women was 1:3. How many men and women were there in the bus at first?

Question 3: Ratio (Constant Total)

In a bus, the ratio of the number of men to the number of women was 2:5. After 3 men alighted the bus and another 3 women boarded the bus, the ratio of the number of men to the number of women was 1:3. How many men and women were there in the bus at first?

There were **84** men and women at first.

MIXED TOPICS- RATIO & PERCENTAGE

Question 1:

PSLE Question

There were a total of 263 strawberry buns and blueberry buns in Uncle Lim's bakery. For the whole day, 41 strawberry buns and 20% of the blueberry buns were sold. At the end of the day, the ratio of the number of strawberry buns to blueberry buns he had was 1:4.

- (a) Express the number of blueberry buns sold as a fraction. (Give your answer in the simplest form.)
- (b) What was the number of buns Uncle Lim had at the end of the day?

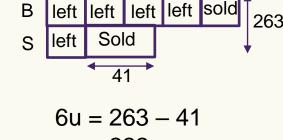

Question 1: Mixed Topics - Ratio & Percentage

There were a total of 263 strawberry buns and blueberry buns in Uncle Lim's bakery. For the whole day, 41 strawberry buns and 20% of the blueberry buns were sold. At the end of the day, the ratio of the number of strawberry buns to blueberry buns he had was 1:4.

- (a) Express the number of blueberry buns sold as a fraction. (Give your answer in the simplest form.)
- (b) What was the number of buns Uncle Lim had at the end of the day?

$$20\% \to \frac{20}{100} \\ = \frac{1}{5}$$

(a) The fraction was $\frac{1}{5}$.

$$= 222$$

$$5u = \frac{5}{6}x \ 222$$

$$= 185$$

(b) The number was 185.

MIXED TOPICS- FRACTIONS & PERCENTAGE

Question 2:

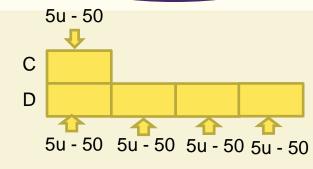

A farmer had $\frac{5}{8}$ as many chickens as ducks at first. After selling 50 chickens and 8 ducks, he had 25% as many chickens as ducks. How many ducks did the farmer have at first?

Question 2: Mixed Topics - Fractions & Percentage

A farmer had $\frac{5}{8}$ as many chickens as ducks at first. After selling 50 chickens and 8 ducks, he had 25% as many chickens as ducks. How many ducks did the farmer have at first?

•	4		
	Before	Change	After
Chicken	5u	-50	1 p
Ducks	8u	-8	4p

 $25\% = \frac{1}{2}$

$$20u - 200 = 8u - 8$$

$$20u - 8u = 200 - 8$$

$$1u = \frac{192}{12}$$

The farmer had 128 ducks at first.

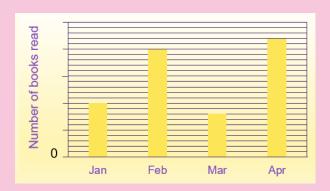

MIXED TOPICS- PERCENTAGE & AVERAGE

Question 3:

PSLE Question

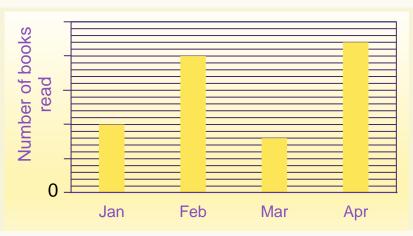

The bar graph shows the number of books read by Class 6A from January to April. The number of books read is not shown on the scale.

- (a) What was the percentage increase in the number of books read from January to February?
- (b) The average number of books read in a month from January to April was 75. How many books did Class 6A read in April?

Question 3: Mixed Topics - Percentage & Average

The bar graph shows the number of books read by Class 6A from January to April. The number of books read is not shown on the scale

PSLE Question

- (a) What was the percentage increase in the number of books read from January to February?
- (b) The average number of books read in a month from January to April was 75. How many books did Class 6A read in April?

(a)
$$\frac{10}{10}$$
 x 100% = 100%

The percentage increase was 100%

Class 6A read 110 books in April.
